

Assignment - I

- 1) find the factorial of a Number using User defined function.

Code :-

```
#include <stdio.h>
int factorial (int n);
int main () {
    int n;
    printf ("Enter the Number : ");
    scanf ("%d", &n);
    factorial (n);
    return 0;
}
```

```
int factorial (int n) {
    int p, f = 1;
    for (i = 1; i <= n; i++) {
        f = f * i;
    }
    printf ("Factorial of %d = %d", n, f);
}
```

Dry Run :-

$$n = 4 \quad i = 1 \quad f = 1$$

$i = 1$	$f = 1 \times 1$	$f = 1$
$i = 2$	$f = 1 \times 2$	$f = 2$
$i = 3$	$f = 2 \times 3$	$f = 6$
$i = 4$	$f = 6 \times 4$	$f = 24$

Output :-

Enter the Number: 4

Factorial of 4 = 24

2) Print the fibonacci series using User defined function.

Code  $\Rightarrow$

```
#include <stdio.h>
int fibonacci(int n);
int main()
{
    int n;
    printf("Enter the Number: ");
    scanf("%d", &n);
    fibonacci(n);
    return 0;
}

int fibonacci(int n)
{
    int i, t1=0, t2=1, ne=t1+t2;
    printf("fibonacci Series: ", t1, t2, " ");
    for (i=3; i<=n; i++)
    {
        printf(", ", ne);
        t1 = t2;
        t2 = ne;
        ne = t1+t2;
    }
}
```

Output -

<u>Dry Run</u>		$i=3$	$t_1=0$	$t_2=1$	$ne=1$
$n=5$			$t_1=1$	$t_2=1$	$ne=2$
Enter the Number : 5		$i=4$	$t_1=1$	$t_2=2$	$ne=3$
fibonacci Series 0, 1,		$i=5$	$t_1=2$	$t_2=3$	$ne=5$
1, 2, 3, 5,					

3.) Reverse a given Number using User defined function.

```
Code #include <stdio.h>
int Reverse(int n);
int main() {
    int n;
    printf("Enter the Number: ");
    scanf("%d", &n);
    Reverse(n);
    return 0;
}

int Reverse(int n) {
    int i, r;
    for (i = 0; i < n; i++) {
        r = n % 10;
        n = n / 10;
        printf("%d", r);
    }
}
```

<u>Output -</u>	<u>Dry Run -</u>	$i=0$	$r=n \% 10$	$n=n / 10$
Enter the Number:	$n = 345$	$i = 1$	$r = 5$	$n = 34$
345		$i = 2$	$r = 4$	$n = 3$
543		$i = 3$	$r = 3$	$n = 0$

4) Find the largest element of the array using user defined function.

Code ⇒

```
#include<stdio.h>
int largest(int ar[], int size);
int main()
{
    int ar[10], size;
    printf("Enter the Size of Array : ");
    scanf("%d", &size);
    for (int i = 0; i < size; i++)
        printf("Enter the Element of Array : ");
    scanf("%d", &ar[i]);
    largest(ar, size);
    return 0;
}
```

```
int largest(int ar[], int size)
{
    int L = ar[0];
    for (int i = 0; i < size; i++)
        if (L < ar[i])
            L = ar[i];
}
```

```
printf("Largest Element in Array : %d", L);
```

Output :-

Enter the size of Array : 5

Enter the Element of

Array : 1

Enter the Element of Array : 2

Enter the Element of Array : 3

Enter the Element of Array : 4

Enter the Element of Array : 5

largest Element in Array :

5

5.) find the Smallest Element of Array using User defined function.

Code → #include <stdio.h>  
=====  
int Smallest (int a[], int size);  
int main () {  
 int a[100], size, i;  
 printf ("Enter the size of Array : ");  
 scanf ("%d", &size);  
 for (i = 0; i < size; i++) {  
 printf ("Enter the Element : ");  
 scanf ("%d", &a[i]);  
 }  
 Smallest (a, size);  
 return 0;  
}  
  
int Smallest (int a[], int size) {  
 int s = a[0];  
 for (i = 0; i < size; i++) {  
 if (s >= a[i]) {  
 s = a[i];  
 }  
 }  
 printf ("Smallest Element of Array : %d", s);  
}

Output

Dry Run

Enter the size of

 $a[5] = 5 \ 4 \ 3 \ 2 \ 1$ 

Array : 5

Size = 5

 $i = 0$  $s = 5$ 

Enter the element : 5

 $i = 1$  $s = 4$ 

Enter the element : 4

 $i = 2$  $s = 3$ 

Enter the element : 3

 $i = 3$  $s = 2$ 

Enter the element : 2

 $i = 4$  $s = 1$ 

Enter the element : 1

 $i = 5$ 

Smallest Element of

Array : 1

 $(a < b) \rightarrow a \leftarrow b$  $(a < b) \rightarrow a \leftarrow b$  $s = 1$  $2(a < b) \rightarrow a \leftarrow b$  $2(a < b) \rightarrow a \leftarrow b$  $(a < b) \rightarrow a \leftarrow b$  $a = 1 \ b = 5 \ a < b \rightarrow a \leftarrow b$  $a = 1 \ b = 4 \ a < b \rightarrow a \leftarrow b$  $a = 1 \ b = 3 \ a < b \rightarrow a \leftarrow b$  $a = 1 \ b = 2 \ a < b \rightarrow a \leftarrow b$  $a = 1 \ b = 1 \ a < b \rightarrow a \leftarrow b$  $a = 1 \ b = 0 \ a < b \rightarrow a \leftarrow b$  $a = 0 \ b = 1 \ a < b \rightarrow a \leftarrow b$  $a = 0 \ b = 2 \ a < b \rightarrow a \leftarrow b$  $a = 0 \ b = 3 \ a < b \rightarrow a \leftarrow b$  $a = 0 \ b = 4 \ a < b \rightarrow a \leftarrow b$  $a = 0 \ b = 5 \ a < b \rightarrow a \leftarrow b$

6.) Convert binary number to decimal number using user defined function?

```
Code → #include <stdio.h>
int bintodec (int n);
int main () {
    int n;
    printf ("Enter the Number : ");
    scanf ("%d", &n);
    bintodec (n);
    return 0;
}
```

```
int bintodec (int n) {
    int bin, rem, dec=0, base=2;
    bin=n;
    while (n>0) {
        rem = n % 10;
        dec = dec + rem * base;
        n = n / 10;
        base = base * 2;
    }
}
```

```
printf ("The binary Number is %.d", bin);
printf ("The decimal Number is %.d", dec);
```

Dry Run -	base=1	base=2	base=4	base=8	Output -
dec=0	dec=0	dec=0	dec=0	dec=0	The binary Number is
n=1000	n=100	n=10	n=10	n=10	1000
rem=1000/10=0	rem=0	rem=10/10=0	rem=1/10=0	rem=1/10=1	The decimal Number
d=0+0+1=0	dec=0+0*2=0	dec=0+0*4=0	dec=0+0*8=0	is 8	
n=1000/10=100	n=100/10=10	n=10/10=1	n=10/10=1		
base=1*2=2	base=2*2=4	base=4*2=8	base=8*2=16		

## 7.) Demonstrate Call by Value and Call by Reference

Call by Value :- In call by value, a copy of the actual parameter is passed to the function. Any changes made to the parameters inside the function do not affect the original variables in the calling function.

Code :-

```
#include <stdio.h>
void Add(int a, int b);
int main()
{
    int x, y;
    printf("Enter the two numbers : ");
    scanf("%d %d", &x, &y);
    int z = x + y; Add(x, y);
    printf("Addition : ", z);
}
```

void Add (int a, int b)

int sum;

sum = a+b;

return sum;

Dry Run -

Add

Output:-

main

x=4

a=4

Enter the two numbers:

y=4

b=4

4

z= 8

Sum = 4+4

4

Sum = 8

Addition : 8

Call by Reference = In call by reference, the address of the actual parameters is passed to the function. Any changes made to the parameters inside the function affect the original variables in the calling function.

Code → #include <stdio.h>

```

void Puc(int *n);

int main() {
    int n = 10;
    printf("Before Calling Increment function,
           n=%d\n", n);
    Puc(&n);
    printf("After Calling increment function, n=%d\n", n);
    return 0;
}

void Puc(int *n) {
    (*n)++;
    printf("Inside increment function, *n=%d\n", *n);
}

```

Day Run	Main	luc	Output -
n=10	*n=10		Before Calling increment function, n= 10
n=11	*n=11		Inside increment function, *n= 11

After calling Increment function,  
n=11

8.) find the frequency of Character in a String.

```
Code → #include <stdio.h>
        #include <string.h>
#define MAX 100
void fre (char str[MAX]);
int main () {
    char s [MAX];
    printf ("Enter a String : ");
    gets (s);
    fre (s);
    return 0;
}
void fre (char str[MAX]) {
    int i, len, freq[256] = {0};
    len = strlen (str);
    for (i=0; i<len; i++) {
        if (str[i] != '\n') {
            freq[(char)str[i]]++;
        }
    }
    printf ("Frequency of Characters in the String : \n");
    for (i=0; i<256; i++) {
        if (freq[i] != 0) {
            printf ("%c : %d Times\n", (char)i, freq[i]);
        }
    }
}
```

Assignment - 2

1.) To check whether a given number given by the user is prime or composite.

Code →

```
#include <stdio.h>
int Prime (int n);
int main ()
{
    int num;
    printf ("Enter a positive Integer: ");
    scanf ("%d", &num);
    if (isPrime (num))
        printf ("%d is a prime: ", num);
    else
        printf ("%d is a composite number: ", num);
    return 0;
}

int Prime (int n)
{
    int i;
    if (num <= 1)
        return 0;
    for (i = 2; i * i <= num; i++)
    {
        if (num % i == 0)
            return 0;
    }
    return 1;
}
```

Q.) To Print all the prime number in given range.

```

Code → #include <stdio.h>
int Prime (int n, int m); // Function declaration
int main () {
    int num1, num2;
    printf ("Enter the two Range : ");
    scanf ("%d %d", &num1, &num2);
    Prime (num1, num2);
    return 0;
}

int Prime (int n, int m) {
    int i, j;
    printf ("Prime numbers from %d and %d are : (%d, %d)\n");
    for (i = num1 + 1; i <= m; i++) {
        if (i == 2) {
            printf ("%d\n", i);
            continue;
        }
        f = 1;
        for (j = 2; j <= i / 2; j++) {
            if (i % j == 0) {
                f = 0;
                break;
            }
        }
        if (f == 1)
            printf ("%d\n", i);
    }
}

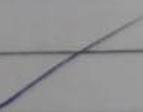

```

3.) To check whether the given number is palindrome or not.

Code #

```
#include <stdio.h>
int Palindrome(int n);
int main()
{
    int n;
    printf("Enter the number:");
    scanf("%d", &n);
    if (Palindrome(n))
        printf("It is palindrome");
    else
        printf("It is not a palindrome");
    return 0;
}

int Palindrome (int n)
{
    int d, r;
    r = n;
    while (n > 0)
    {
        d = n % 10;
        r = (r * 10) + d;
        n = n / 10;
    }
    if (r == n)
        return 1;
    else
        return 0;
}
```

4.) To Find Sum of digit using User defined function.

Code ↳

```
#include <stdio.h>
```

```
int SD(int n);
```

```
int main()
```

```
{ int n = 64;
```

```
printf("%d", SD(n));
```

```
return 0; }
```

```
int SD(int n)
```

```
{ int sum = 0;
```

```
while (n != 0)
```

```
{ sum = sum + n % 10;
```

```
    n = n / 10; }
```

```
return sum; }
```

3(a + b)  $\Rightarrow$  a + b

$a = 10 \times b$

$b + (a + b) = c$

$c = 10b + c$

$(b + c) \mid c$

it means

9 | c

c is a number

5) To convert decimal to binary number using user defined function.

Code →

```
#include <stdio.h>
int DB (int n);
int main ()
{
    int dec, bin;
    printf ("Enter the decimal Number:");
    scanf ("%d", &dec);
    bin = DB (dec);
    printf ("Decimal (%d) = Binary (%d)", dec,
           bin);
    return 0;
}

int DB (int n)
{
    int bin=0, rem, m, base=1;
    m=n;
    while (m!=0)
    {
        rem=m%2;
        bin=bin+base*rem;
        base=base*10;
        m=m/2;
    }
    return bin;
}
```

Octal

6.) To convert a decimal number to hexadecimal and display the result:

Code ⇒ #include <stdio.h>

int Do(int n);

int main() {

int n;

printf("Enter the number : ");

scanf("%d", &n);

Do(n);

return 0;

int Do(int n) {

int r, o = 0, base = 1;

while (n > 0) {

r = n % 8;

o = o + r \* base;

n = n / 8;

base = base \* 10; }

printf("Octal Number : %d", o);

return 0;

Output ?

7.) To convert a decimal Number to hexadecimal and display the result.

Code ⇒ #include <stdio.h>

int DH(int n);

int main() {

int n;

printf("Enter the number:");

scanf("%d", &n);

DH(n);

return 0; }

int DH(int n) {

char H[20];

int r, q = 0;

while (n != 0) {

r = n % 10;

if (r < 10) {

H[q] = r + '0'; }

else {

H[q] = remainder r + 55; }

q++;

n /= 10; }

printf(" Hexadecimal Number:");

for (int j = q - 1; j >= 0; j--) {

printf("%c", H[j]); }

return 0; }

8.) To print table of a given Number

#include <stdio.h>

void Table(int n);

int main()

int n;

printf("Enter the number: ");

scanf("%d", &n);

printf("Table of %d is\n", n);

Table(n);

return 0;

void Table (int n)

int i;

for (i=1, i <= 10; i++)

printf("%d \* %d = %d\n", n, i, n\*i);

3 6 9 12 15 18 21 24 27 30

3 (a+b) + 9

Bands

2 4 6 8 10 12 14

i++

2 (a+b) + 1

(a+b)(a+b+2) + 1

(a+b)(a+b+1) + 1

(a+b)(a+b+2) + 1

a+b+1

9.) To find the factorial of a given number.

Code  $\Rightarrow$  #include <stdio.h>

int fact(int n);

int main() {

int n, result;

printf("Enter the number: ");

scanf("%d", &n);

result = fact(n);

printf("%d", result);

return 0; }

int fact(int n) {

int i, f = 1;

for (i = 1; i <= n; i++) {

f = f \* i; }

return f;

}

10.) To find the length of a string.

Code #include <stdio.h>

```
int str (char st[30]);
```

```
int main () {
```

```
    char st[30];
```

```
    int i, len;
```

```
    printf ("Enter the string : \n");
```

```
    gets (st);
```

```
    len = str (st);
```

```
    printf ("Length of given string is : %d", len);
```

```
    return 0; }
```

```
int str (char st[30]) {
```

```
    int i, len=0;
```

```
    for (i=0; st[i]!='\0'; i++) {
```

```
        len++; }
```

```
    return (len); }
```

Q.) To Reverse the String using Stack.

Code → #include <stdio.h>

#define MAX 20

int top = -1;

char stack[MAX];

char pop();

void push(char);

void main() {

int i;

char str1[MAX], str2[MAX];

printf("Enter the string : ");

gets(str1);

for (i=0; i<strlen(str1); i++)

push(str1[i]);

for (i=0; i<strlen(str1); i++)

str2[i] = pop();

printf("Original String : ");

puts(str1);

printf("Reversed String : ");

puts(str2);

void push (char item) {

if (top == (MAX-1)) {

printf("Stack Overflow");

return;

stack[++top] = item;

char pop () {

if (top == -1) {

printf("Stack Underflow");

return 0;

return stack[top--];

Assignment - 3

1.)

```
Code ⇒ #include <stdio.h>
#define MAX 100
int stk[100], Ch, n, top = -1;
void push();
void pop();
void display();
int main()
{
    printf("Enter the size of stack : ");
    scanf("%d", &n);
    printf("1. PUSH\n 2. POP\n 3. DISPLAY\n
        4. EXIT");
    while(1)
    {
        printf("Enter the choice : ");
        scanf("%d", &choice);
        switch (Ch)
        {
            Case 1:
                push();
                break;
            Case 2:
                pop();
                break;
            Case 3:
                display();
                break;
            Case 4:
                printf("Exit");
        }
    }
}
```

```
break;  
default:  
    printf("Enter a Valid choice");  
    return 0;  
}
```

```
void push()  
{  
    if (top >= n - 1)  
        printf("Stack is Overflow");  
    else  
        printf("Enter a value: ");  
        scanf("%d", &n);  
        top++;  
        stk[top] = n;  
}
```

```
void pop()  
{  
    if (top <= -1)  
        printf("Stack is Underflow");  
    else  
        printf("The popped element in stack is ");  
        for (i = top; i >= 0; i--)  
            printf("%d", stk[i]);  
        top--;  
}
```

```
void display()  
{  
    if (top == 0)  
        printf("The Element in stack is ");  
    for (i = top; i >= 0; i--)  
        printf("%d", stk[i]);  
    printf("\n Press Next choice");  
    else  
        printf("The stack is Empty");  
}
```

3.) Check whether a given string is palindrome or not using Stack.

Code  $\Rightarrow$  ~~#include <stdio.h>~~

~~#include <stdlib.h>~~

~~#include <string.h>~~

~~#define m 50~~

~~int top = -1, f = 0;~~

5.) Evaluate a given postfix expression using stack.

```

Code #include <stdio.h>
#include <stdlib.h>
#include <ctype.h>
#define m 100
int isempty(int top) {
    return top == -1;
}
int isfull(int top, int c) {
    return top == c - 1;
}
void push(int stk[], int *top, int v) {
    if (isfull(*top, m)) {
        printf("Stack Overflow");
        exit(1);
    }
    (*top)++;
    stk[*top] = v;
}
int pop(int stk[], int *top) {
    if (isempty(*top)) {
        printf("Stack Underflow");
        exit(1);
    }
    int v = stk[*top];
    (*top)--;
    return v;
}
int EP(char *exp) {
    int stk[m];
    int top = -1;
    for (int i = 0; exp[i] != '\0'; i++) {
        if (isdigit(exp[i])) {
            push(stk, &top, exp[i] - '0');
        } else {
            int op2 = pop(stk, &top);
            int op1 = pop(stk, &top);
            push(stk, &top, op1 + op2);
        }
    }
    return pop(stk, &top);
}

```

```
int op1 = pop(STK, ttop);
switch(exp[i]) {
    case '+':
        push(STK, ttop, op1 + op2);
        break;
    case '-':
        push(STK, ttop, op1 - op2);
        break;
    case '*':
        push(STK, ttop, op1 * op2);
        break;
    case '/':
        push(STK, ttop, op1 / op2);
        break;
    default:
        printf("Invalid Operation");
        return pop(STK, ttop);
```

```
int main() {
    char exp[] = "352*+";
    printf("Postfix expression : ./slw", exp);
    printf("Result : ./dlw", EP(exp));
    return 0;
```

6.) Implement a Queue using array and Show the implementation of all basic operation performed on queue.

Code ⇒

```
#include <stdio.h>
#include <stdlib.h>
#define m 100
int q[m];
int f = -1, r = -1;
bool isEmpty() {
    return (f == -1 && r == -1);
}
bool isFull() {
    return (r + 1) % m == f;
}
void enq(int v) {
    if (isFull())
        printf("Queue is full");
    return;
}
else if (isEmpty())
    f = r = 0;
else
    r = (r + 1) % m;
q[r] = v;
}
int deq() {
    int v;
    if (isEmpty())
        printf("Queue is empty");
    return -1;
}
else if (f == r)
    v = q[f];
    f = r = -1;
else
    v = q[f];
}
}
```

```
f = (f+1) % m; v  
return v; }  
int peek() {  
    if (isEmpty()) {  
        printf("Queue is empty");  
        return -1; }  
    return q[f]; }  
int main() {  
    enq(10);  
    enq(20);  
    enq(30);  
    printf("Dequeued element: %d", deq());  
    printf("front element: %d", peek());  
    printf("Is queue empty? %d", isEmpty());  
    return 0;  
}
```

## 1.) Implement Queue Using Stack

Code ↴

```

#include <stdio.h>
#include <stdlib.h>
#define N 20
int s[N], top = -1;
int pop() {
    return s[top--];
}
void push(int x) {
    if (top == N - 1)
        printf("Stack is full");
    else {
        top++;
        s[top] = x;
    }
}
void enqueue(int x) {
    push(x);
}
void display() {
    int i;
    for (i = 0; i <= top; i++)
        printf("%d", s[i]);
}
int deg() {
    int data, res;
    if (top == -1)
        printf("Queue is Empty");
    else if (top == 0)
        return pop();
    data = pop();
    res = deg();
    push(data);
    return res;
}

```

```
Print main () {  
    enq (5);  
    enq (10);  
    enq (15);  
    enq (20);  
    enq (25);  
    printf("Queue");  
    display ();  
    printf("In Queue After Dequeue");  
    deq ();  
    display ();
```

Assignment - 4

- 1.) To implement Singly linked list and show all the operations performed on it.

Code ⇒

```
#include <stdio.h>
#include <stdlib.h>

Struct node {
    int data;
    Struct node *next;
};

Struct node *head;
```

```
void begin();

ptr = ptr->next; }
}
}

```

Q2) To Implement Stack using Linked List.

Code → #include <stdio.h>

#include <stdlib.h>

Struct node {

int data;

Struct node \*next; };

Struct node \*head;

void begin();

void end();

void display();

void main() {

int ch = 0;

while (1) {

printf("\n1. Insert or PUSH\n2. POP\n3. DISPLAY

\n4. Exit");

printf(" Enter the choice: ");

scanf("%d", &ch);

switch (ch) {

case 1: begin();

break;

case 2: end(); break;

case 3: display(); break;

case 4: exit(0); break;

default: printf(" Invalid choice"); }

void begin() {

Struct node \*ptr;

int item;

ptr = (Struct node \*)malloc(sizeof(Struct node));

if (ptr == NULL)

printf(" Stack OVERFLOW");

else {

printf(" Enter Value");

scanf("%d", &item);

```
ptr-> data = i + m;
ptr-> next = head;
head = ptr;
printf(" Item Pushed in Stack "); 33

void begin() {
    Struct node *ptr;
    if (head == NULL)
        printf(" Stack Underflow ");
    else {
        ptr = head;
        head = ptr->next; free(ptr);
        printf(" Item Popped from Stack "); 33
    }
}

void display() {
    Struct node *ptr;
    ptr = head;
    if (ptr == NULL)
        printf(" Stack is Empty ");
    else {
        printf(" Element in Stack are: ");
        while (ptr != NULL) {
            printf("%d ", ptr->data);
            ptr = ptr->next; 3 3
        }
    }
}
```

3.) To implement queue using linked list.

Code → #include <stdio.h>  
#include <stdlib.h>

Struct node {

int data;

Struct node \*next; };

Struct node \*head;

void begin(); void insert(); void display();

void main()

{ int ch=0; while(1){

printf("1. ENQUEUE 2. DEQUEUE 3. DISPLAY 4.  
5. EXIT ");

printf(" Enter the choice: ");

Scanf("%d", &ch);

Switch(ch){

Case 1:

begin(); break;

Case 2: insert(); break;

Case 3: display(); break;

Case 4: exit(0); break;

default: printf(" Invalid choice ");

void begin()

Struct node \*ptr, \*itm;

ptr = (Struct node\*) malloc(sizeof(Struct node));

If (ptr == NULL) printf(" OVERFLOW QUEUE ");

else {

printf(" Enter the Value "); Scanf("%d", &itm);

ptr->data = itm; ptr->next = head;

head = ptr; printf(" Item Inserted ");

void insert()

Struct node \*ptr, \*temp;

If (head == NULL) printf(" Queue is Empty ");

```

else if (head->next == NULL) { head = NULL;
    free(head);
    printf(" Item Deleted"); }

else { ptr = head; while (ptr->next != NULL) {
    ptr->temp = ptr;
    ptr = ptr->next;
    temp->next = NULL; free(ptr);
    printf(" Item Deleted"); }

void display () { Struct node *ptr; ptr = head;
    if (head == NULL) printf(" Queue is Empty");
    else {
        printf(" Elements in Queue");
        while (ptr != NULL) {
            printf("\n%d", ptr->data);
            ptr = ptr->next; }
    }
}

```

4.) To add show the addition of two polynomial using linked list.

```

Code #include <stdio.h>
#include <stdlib.h>
Struct node { int coef; int exp; Struct node *next; };

void insert (Node **poly, int coef, int exp) {
    Node *temp = (Node *) malloc (sizeof (Node));
    temp->coef = coef;
    temp->exp = exp; temp->next = NULL;
    if (*poly == NULL) *poly = temp; return;
    Node *current = *poly; while (current->next != NULL) {
        current = current->next; }
    current->next = temp; }

void print (Node *poly) { if (poly == NULL) {
    return 0; }
    printf("%d", poly->coef);
    if (poly->exp != 0) printf ("x^%d", poly->exp);
    if (poly->next != NULL) printf (" + ");
    print (poly->next); }

```

```

Node * current = poly; while (current != NULL) {
    printf("%d*x^%d", current->coef, current->exp);
    if (current->next != NULL) printf(" + ");
    current = current->next;
}
printf("\n");
Node * add (Node * poly1, Node * poly2) {
    Node * result = NULL; while (poly1 != NULL && poly2 != NULL) {
        if (poly1->exp == poly2->exp) {
            insert (&result, poly1->coef + poly2->coef, poly2->exp);
            poly1 = poly1->next; poly2 = poly2->next;
        } else if (poly1->exp > poly2->exp) {
            insert (&result, poly1->coef, poly1->exp);
            poly1 = poly1->next;
        } else {
            insert (&result, poly2->coef, poly2->exp);
            poly2 = poly2->next;
        }
    }
    while (poly1 != NULL) insert (&result, poly1->coef, poly1->exp);
    while (poly2 != NULL) insert (&result, poly2->coef, poly2->exp);
    poly2 = poly2->next; return result;
}

int main() {
    Node * poly1 = NULL;
    insert (&poly1, 5, 4);
    insert (&poly1, 3, 2);
    Node * poly2 = NULL;
    insert (&poly2, 4, 4);
    insert (&poly2, 2, 2);
    printf("First Poly : "); printf(poly1);
    printf("Second Poly : "); printf(poly2);
    Node * result = add (poly1, poly2);
    printf("Result : ");
    printf(result);
    return 0;
}

```

5) To create a doubly linked list with five nodes and display its elements.

```

code #include <stdio.h>
#include <stdlib.h>
struct node {
    int n;
    struct node *pre;
    struct node *next;
} stnode, *enode;
void DLC (int n);
void Display ();
int main () {
    int n;
    stnode = NULL;
    enode = NULL;
    printf ("Input the number of node : ");
    scanf ("%d", &n);
    DLC (n);
    Display ();
    return 0;
}
void DLC (int n) {
    int i, num;
    struct node *fnode;
    if (n >= 1) {
        stnode = (struct node *) malloc (sizeof (struct node));
        if (stnode != NULL) {
            printf ("Input data for node 1 : ");
            scanf ("%d", &num);
            stnode->num = num;
            stnode->pre = NULL;
            stnode->next = NULL;
            enode = stnode;
        }
        for (i = 2; i <= n; i++) {
    }
}

```

```
lnode = (Struct node*) malloc (sizeof(Struct node));
if (lnode != NULL) {
    printf("Input data for node %d: ", i);
    scanf("%d", &num);
    lnode->num = num;
    lnode->pre = pre;
    lnode->next = NULL;
    pre->next = lnode;
    lnode->next = lnode;
}
else {
    printf("Memory not allocated");
    break;
}
printf("Memory can't be allocated");
```

```
void Display () {
    Struct node *temp;
    int n=1;
    if (lnode == NULL)
        printf("No data found in the list yet!");
    else
        temp = lnode;
    printf("Data entered on the list are: ");
    while (temp != NULL) {
        printf(" node %d : %d\n", n, temp->num);
        n++;
        temp = temp->next;
    }
}
```

6) To create a circular linked list a. with five nodes and display its elements.

Code ⇒ #include <stdio.h>

#include <stdlib.h>

struct node {

int data;

struct node \* next; } Node;

Node \* crN (int data) { Node;

Node \* newN = (Node \*) malloc (sizeof (Node));

if (newN == NULL)

printf ("Memory Allocation failed\n"); exit(1);

}

newN -> data = data;

newN -> next = NULL;

return newN; }

void Display (Node \* head) {

if (head == NULL)

printf ("List is empty\n");

return; }

Node \* temp = head;

do { printf ("%d", temp -> data);

temp = temp -> next; }

while (temp != head);

printf ("\n"); }

int main () {

Node \* head = Create (crN (1));

Node \* Second = crN (2);

Node \* Third = crN (3);

Node \* fourth = crN (4);

Node \* fifth = crN (5);

head -> next = Second;

Second -> next = Third;

Third -> next = Fourth;

```
third->next = fourth;
fourth->next = fifth;
fifth->next = head;
display (head);
```

```
Node * temp = head;
Node * nextNode;
```

```
do {
```

```
    nextNode = temp->next;
    free (temp);
    temp = nextNode;
```

```
    while (temp != head),
```

```
        return 0;
```

```
    else = pointer to node
```

```
    Release (pointer to node)
```

```
    free (pointer to node)
```

```
    pointer to node = NULL
```

```
    while (pointer to node != NULL)
```

```
        pointer to node = pointer to node->next
```

```
        free (pointer to node)
```

```
    pointer to node = NULL
```

```
    free (pointer to node)
```

```
    pointer to node = NULL
```

```
    free (pointer to node)
```

7.) To implement Linear Search on an Array.

Code ⇒ #include <stdio.h>

int LS(int arr, int s, int k)

for (int i = 0; i < size; i++)

if (arr[i] == key) {

return i;

return -1;

}

int main () {

int ar[10] = {3, 4, 1, 7, 5, 8, 12, 42, 3, 13};

int s = sizeof(ar)/size of (ar[0]);

int k = 4;

int index = LS(ar, s, k);

if (index == -1) {

printf("The element is not present in the array ");

else {

printf("The element is present at arr[%d]",

index);

return 0;

}

8.) To Implement Binary search on an Array.

Code ↴

```
#include <stdio.h>
```

```
int BinS (int arr[], int l, int r, int x) {
```

```
    if (r >= l) {
```

```
        int mid = l + (r - l) / 2;
```

```
        if (arr[mid] == x)
```

```
            return mid;
```

```
        if (arr[mid] > x)
```

```
            return BinS (arr, l, mid - 1, x);
```

```
        else
```

```
            return -1;
```

```
    }
```

```
int main () {
```

```
    int arr[] = {2, 3, 4, 10, 40};
```

```
    int size = sizeof(arr) / sizeof(arr[0]);
```

```
    int x = 10;
```

```
    int index = BinS (arr, size, 0, size - 1, x);
```

```
    if (index == -1) {
```

```
        printf ("Element is not present in array");
```

```
    use {
```

```
        printf (" Element is present at index %d", index);
```

```
    return 0;
```

```
}
```

Output:

~~10~~
